Do you demand the best from your professional career? Are you inspired by excellence? At SAP, you will have the power to make a real impact. As the global market leader for business software, SAP helps companies and organizations in more than 25 industries to run better.

PURPOSE AND OBJECTIVES

The 'Chairman Projects' team in product development at SAP Labs Palo Alto is looking for interns with ninja-like software engineering (making, creating, hacking) and/or design skills.

We're a small interdisciplinary team with skills and experiences ranging from architecture, acting, movie directing, executive communication, photography, visual and interaction design, engineering, and last but not least software programming for satellites far up in space. We're working on diverse projects for SAP's head of development, from development of new ways to visualize data to new types of business and mobile solutions to visionary technology prototypes.

If you are highly motivated and excited to work in a dynamic environment with changing tasks and responsibilities, sometimes brainstorming far away visions, sometimes hacking software together based on challenging requirements and tight timelines, then we are looking for you. We would be delighted to hear about the projects that you have worked on so far – don't hesitate to impress us by sharing concepts, photos, screenshots, videos or code fragments of what you have built.

- Be part of a vibrant intern community on the SAP Palo Alto campus (monthly events, networking sessions, expert presentations)
- Free lunches, ice cream, beverages and coffee in our canteens around the campus
- Connect with world leading software engineers and become part of the worldwide SAP network
- Work out of our re-designed open work space in the heart of Silicon Valley
- Establish your network in the IT industry by interacting with strategic SAP customers and implement their feedback

EXPECTATIONS AND TASKS

Key tasks might be:

- Prototyping technology concepts with short turnaround times
- Developing user-centric apps in HTML5/JavaScript/SAP UI5
- Designing and implementing new interaction concepts with user interfaces of the next generation

EDUCATION AND QUALIFICATIONS / SKILLS AND COMPETENCIES

- Major in Software/Computer Engineering or related fields
- Profound experience in at least one programming language like JavaScript, Java, C++ or C# and in building web and/or mobile applications
- Profound experience with database development/SQL
- Strong interest & knowledge in cutting edge IT (e.g. any of the following areas: trending mobile apps, new technologies & new ways of user interactions, visual design, creative coding, machine learning, electronics, robotics, embedded programming the start-up scene and related fields)
- Enjoying ambiguous challenges, fast iterations and independent thinking
- Strong team-players & open communication skills
