Prototype Developer (iOS)

We are seeking a talented iOS Developer to join our team. We are a young, dynamic group of individuals who always try to innovate and implement new and groundbreaking ideas. We are currently developing a prototype for an iOS application in the field of lifestyle with focus on individual relationships.

Your responsibility will be to develop an initial prototype that shows the core features of the application. You will be closely working together with a designer since our approach is heavily design orientated. Your ideal qualifications are notable **project experiences with iOS** development and fundamental knowledge about the **iOS SDK**. A bachelor's degree in computer science or any related field is preferred but not a must. If you are a talented individual who is confident about developing sophisticated algorithms, this job is perfect for you.

If you want to create new and innovative products and strive for the opportunity to be part in creating them, feel free to contact us at app@popakademie.de. We will then send you additional information regarding the project.

Sincerely,

Fabian Holtkamp

Popakademie Baden-Württemberg
Hafenstraße 33
68159, Mannheim
